

quizzy

ABOUT QUIZZY

Quizzzy is a real-time, [general trivia video game app](#) made for both Android and iOS. It uses modern technologies for [video streaming](#) and fast, [mass communication](#) for users to interact with the game and between other users [instantaneously](#).

It gives the user a fun experience rewarding them with prizes for being the top contestant in cognitive gaming.

THE CHALLENGE

In a demanding market, mobile users expect speed, quality, and a seamless experience.

Innuy was tasked to build and manage a **high quality video streaming platform** that would be able to scale to a high volume of users with the level of speed that users expect in current times.

We needed to **manage and coordinate the timing** of the questions to be in sync with the video, **handle thousands of user responses** during a short period of time, and ensure every answer was correctly rewarded.

WHAT WE DID

Our developers built the mobile application from back-end to front-end.

By using [agile methodologies](#) and [cutting-edge technologies](#), we configured the [streaming flow](#) to meet the requirements of the application ensuring the end user gets [the best experience possible](#).

We provided [fast responses](#) for even the most [complex operations](#) and gave the user a [friendly interface](#) to interact.
